12. What is drill hole diameter?

- a) Speed of drilling
- b) Weight of the drill
- c) Length of the drill
- d) Size of the hole

Correct Answer: d) Size of the hole

Explanation: The drill hole diameter refers to the width of the hole created by the drill bit. This measurement is crucial for Blaster Drillers, as it determines how much explosive material can be placed in the hole for blasting operations. Choosing the correct diameter is vital for effective blasting.

13. What is the purpose of water in drilling?

- a) To increase weight
- b) To cool the drill bit
- c) To make holes larger
- d) To mix with explosives

Correct Answer: b) To cool the drill bit

Explanation: Water is often used during drilling to cool the drill bit and reduce friction. It helps prevent overheating, which can damage the drill bit and hinder drilling efficiency. Blaster Drillers may use water for this purpose, particularly when drilling in hard rock conditions.

14. What is a drill collar?

- a) A safety device
- b) A heavy pipe section
- c) A type of drill bit
- d) Used for measuring depth

Correct Answer: b) A heavy pipe section

Explanation: A drill collar is a thick, heavy pipe section added to the drill string to provide weight and stability during drilling. This added weight helps to keep the drill bit in contact with the material being drilled. Blaster Drillers use drill collars to improve drilling performance and precision.

15. What is a rock drill?

- a) A manual tool
- b) Not used in drilling
- c) Designed for hard materials
- d) Only for soft soil

Correct Answer: c) Designed for hard materials
